## **DETAILED ACTION**

### ***Double Patenting***

Throughout the prosecution in this application, provisional obviousness-type double patenting rejections were made over copending Application Nos. 10/716,685 and 10/717,006. It is noted that all three applications have the same filing date. This application is determined to be the base invention, thus, terminal disclaimers are not required for this application.

## **REASONS FOR ALLOWANCE**

The following is an examiner's statement of reasons for allowance: The applied prior art of record to Fung discloses a process for converting an oxygenate feed to light olefins wherein a feed mixture contains 1-90 wt% methanol and 1-99 wt% ethanol. Applicants have showings in the specification and Rule 132 Declaration for superior results when a feed mixture of methanol to ethanol at a claimed weight ratio of 4:1 to 19:1 is employed. The oxygenate conversion performed using the claimed weight ratio range at a temperature of 475°-500° C produces increased selectivity of ethylene and propylene and increased ethylene/propylene ratio.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
